SUMMARY

Backend engineer with 4 years building and operating production systems for fintech, marketplace and Web3 products. Specialises in Laravel and NestJS APIs that carry 15,000+ transactions a day at 99.9% uptime, with a consistent record of cutting response times by around 40% through Redis caching, indexing and query discipline. Has owned systems end to end — architecture, payment integration, CI/CD, deployment and production incident response — including as the sole engineer behind a live crypto exchange backend.

CORE SKILLS

Languages: PHP, TypeScript / JavaScript, SQL, Solidity, Python (working knowledge)

Backend: Laravel, NestJS, Node.js, Express, REST API design, event-driven architecture, webhooks, JWT / OAuth2, queues & workers

Data: MySQL (indexing, query optimisation), PostgreSQL, Redis (caching, queues)

Frontend: React, Vue.js, Next.js, Inertia.js, Tailwind CSS

Infra & DevOps: Git, GitHub Actions, Docker, AWS, DigitalOcean, Laravel Cloud, cPanel / WHM, Let's Encrypt

Integrations: Paystack, Flutterwave, Kora, PSD2 / bank APIs, The Graph, Web3.js, Chainlink, n8n, OpenAI API

EXPERIENCE

Freelance Full-Stack Developer
Jan 2026 – Present

Independent · Remote

- Designed and shipped a multi-currency e-commerce platform end to end — React storefront, React admin panel and Laravel REST API — for a retail client, supporting NGN, USD, GHS, KES, XAF, XOF, EGP and TZS through the Kora payment gateway, with NGN as base currency and display-layer conversion.
- Delivered the full production deployment on constrained shared hosting, resolving Let's Encrypt SSL, SMTP, MySQL compatibility and SPA routing (custom .htaccess rewrite rules).
- Built GitHub Actions pipelines for automated FTP deployment to cPanel, giving the client zero-touch releases across both codebases.

Laravel · React · MySQL · Kora · GitHub Actions · cPanel

Backend Engineer (Laravel API)
Sep 2025 – Dec 2025

ShopittPlus · Uyo, Nigeria shopittplus.com

- Architected and scaled the core API for a multi-vendor food and tech marketplace: vendor onboarding, listings and inventory, order lifecycle, delivery tracking and peer-to-peer transactions.
- Engineered payment and payout workflows on Paystack, supporting vendor settlements and thousands of daily interactions at high reliability.
- Cut API response times through MySQL indexing, Redis query caching and an event-driven order pipeline, holding stability through peak order volume.

Laravel · MySQL · Redis · Paystack · n8n · GitHub Actions

Backend Engineer (Laravel API)
Apr 2025 – Sep 2025

TransactX · Lagos, Nigeria mytransactx.com

- Built and scaled the core banking API behind TransactX, serving 50,000+ users at 99.9% reliability.
- Engineered PSD2-compliant integrations with multiple banks and payment gateways, delivering real-time balance synchronisation and fraud detection.
- Shipped P2P transfers, airtime and data purchases, bill payments (utilities, cable TV) and request-money workflows.
- Reduced API response times by 40% and sustained 15,000+ daily transactions through Redis caching and MySQL indexing.
- Automated settlement reconciliation and transaction reporting, cutting manual processing errors by 65%; added n8n workflows for transaction anomaly detection and onboarding sequences.

Backend & Blockchain Engineer (NestJS)
Mar 2025 – Nov 2025

Espay · Lagos, Nigeria

- Sole engineer on a peer-to-peer crypto exchange for Espees on the Toronet blockchain — architecture, backend, blockchain integration, database design, deployment and production troubleshooting.
- Built a NestJS service that connects to the Toronet network, filters exchange-relevant transactions and synchronises on-chain events with the application backend in real time.

- Engineered the on-chain to off-chain pipeline using webhook-driven event processing, with confirmation-delay handling and idempotency guards against duplicate settlement.
- Designed a dual token-address wallet architecture separating exchange and user wallets, improving asset isolation and reconciliation control.

NestJS · TypeScript · Node.js · React · PostgreSQL · Toronet · Webhooks

Senior Full-Stack Developer (Laravel / Vue.js) Jan 2025 – Mar 2025

Tekinni · Remote tekinni.com

- Architected the eCommerce backend in Laravel — order processing, inventory management and payment integrations — held at 99.9% uptime under peak load.
- Built the frontend in Vue.js, TypeScript and Inertia.js, contributing to a 30% increase in mobile conversions.
- Cut update downtime by 50% by introducing GitHub Actions CI/CD for automated testing and deployment.

Laravel · MySQL · Vue.js · Inertia.js · TypeScript · Tailwind · GitHub Actions

Backend Engineer (NestJS) Oct 2024 – Dec 2024

Kachim · Lagos, Nigeria

- Built the backend for an EdTech platform giving university students structured academic resources — past questions, course summaries and personalised content.
- Implemented authentication and the full account lifecycle in NestJS and TypeScript: registration, email OTP verification, login, password recovery, profile management and account deletion.
- Designed subscription entitlements across four tiers with semester and session-based access, plan validation and Flutterwave payment link generation.

NestJS · TypeScript · MySQL · JWT · Flutterwave · GitHub Actions

Blockchain Engineer Aug 2024 – Dec 2024

VestPad · Remote vestpad.io

- Designed and deployed a decentralised launchpad in Solidity for tokenised crowdfunding on Ethereum.
- Built custom The Graph subgraphs for real-time token sale analytics, and a Node.js / Web3.js backend for on-chain to off-chain data pipelines.
- Held 99.8% accuracy in reported on-chain data by instrumenting transaction monitoring.

Solidity · Web3.js · Node.js · The Graph · PostgreSQL

EARLIER EXPERIENCE

Software Engineer — Swap2Naira Jun 2024 – Aug 2024

London, UK · Contract swap2naira.com

Architected the Laravel backend for a naira/crypto swap platform handling up to 20,000 daily transactions at 99.9% uptime; built the React/TypeScript frontend (30% lift in mobile usage) and cPanel CI/CD pipelines that cut update downtime by 50%.

Software Engineer — Foodpreneurshub Aug 2024 – Oct 2024

Ontario, Canada · Contract

Refactored a production Laravel backend to resolve issues disrupting business operations; introduced GitHub Actions deployment to cPanel (40% faster releases) and improved the admin panel used by content editors.

Software Engineer — Fabricspa Oct 2022 – Dec 2022

Lagos, Nigeria · Contract

Built a laundry management platform from scratch in Laravel and Vue.js with real-time order tracking, secure payment integration and automated invoicing that reduced payment errors by 20%.

Backend (PHP) Tutor — The Roothub May 2023 – Aug 2023

Akwa Ibom, Nigeria

Taught PHP, API development and MySQL to cohorts of new developers; designed hands-on CRUD and API projects and mentored students on debugging and database practice.

EDUCATION & CERTIFICATIONS

BSc Computer Science — University of Uyo, Nigeria *(in progress)*

Certifications: Alchemy University — Blockchain Development · Cyfrin Updraft — Smart Contract Security · Postman — API Student Expert · IBM SkillsBuild — AI Fundamentals & AI Literacy

Community: Organizer, Google Developer Group on Campus (GDGoC), University of Uyo — developer bootcamps, hackathons and build days.
